OpenChargeback - Monthly Close Package

Period: 2025-12 Wrapper: PDF portfolio

A forensic, audit-defensible snapshot of one billing month. Every artifact below is embedded as a file attachment: the original source files (verbatim, exactly as ingested), the statements sent to PIs, the journal export, the proof-of-send log and the audit trail.

Re-hash any attachment and compare to its sha256 below to verify it. The 6-character suffix on this file's name is the sha256 of the whole PDF -- the same canonical data always reproduces the same hash.

sha256	bytes	file
